Passion fast forward

Seac Sub has been a leading dive company since 1971. Founded by Marco Arata and Attilio Rapallini, our company has grown since then in size, strength, and innovation to become a benchmark in the industry. With the arrival of Marco's son Daniele Arata, we strategically reorganized the company, expanding our product lines and repositioning our brand image, bringing us to the forefront while continuing to honour our founding principles.

Logistics and shipping

Building on the changes we made in response to new challenges and a constantly evolving market, in 2014 we revised and reorganized our logistical and production departments. We brought new technologies and new management systems online to make our shipping and supply department work better and more efficiently as we continue to serve the entire world. Our high standards and advanced production and orders management criteria can satisfy every customer.

Manufacture of spearguns

Spearfishing guns are one of Seac's true points of excellence. With more than forty years of experience and a daily passion for underwater spearfishing are two of the greatest guarantees that we can offer our customers. Our careful focus on production and quality controls on both materials and finished products - including the ballistic testing our products undergo - allows us to offer a range of accurate, high quality weapons that meet the needs of even the most demanding spearfishermen.

Slings made of 100% natural latex

Seac speargun slings are manufactured using the best latex tubes on the market, and every batch must pass the most stringent of testing. We test our slings with dynamometric and accelerated aging equipment to ensure the correct consistency in quality. The slings are assembled using special hydraulic equipment designed specifically for this purpose.

The Seac freediving computer is designed and manufactured in Italy, and it is a faithful companion in and out of the water. Designed for all your training, Jack doesn't stop at measuring pressure, dive time, and temperature: it also features its own algorithm to reduce the risks of Taravana and Hemoptysis.

What's more, the scuba diving functions, depth gauge function, and outdoor and fitness functions make Jack the ideal companion for every day, not just when freediving.

JACK

NEW

Jack is the freediving computer Seac developed for fishermen and freedivers. Designed and programmed with specific and elaborate algorithms, this computer reduces the risk of Taravana and Hemoptysis while diving, thanks to two functions that constantly monitor the diver. The characteristics reserved for diving are joined by others designed for Outdoor and Fitness, keeping you consistently prepared in body and mind. Made with special technopolymers and advanced-technology elastomers, the Jack computer is lightweight and comfortable to wear. Easy to use thanks to its adjustable graphic LCD display, users control the computer with the four buttons that easily select each of the menu options.

TARAVANA PREVENTION ALGORITHM

The Algorithm bases itself automatically on saturation of inert gases, dehydration, and hypoxia to recommend the minimum recovery time between one dive and the next, in order to reduce the risk of Taravana.

HEMOPTYSIS PREVENTION ALGORITHM

The Algorithm runs a parameterization as a function of the depth the diver wishes to reach and plans a procedure for approaching the desired depth.

FREEDIVING FUNCTIONS

Recommended recovery time with algorithm, recovery time countdown, surf time, depth, dive time, dive number, speed, max depth, water temperature, current time, graphic profile of most recent dive in the session, session summary.

ALARMS

Alarms at target depths, at depth increments, time alarm. Hydration reminder.

ALARMS TYPE

Acoustic and visual.

COMPASS

3D compensated up to 90° with accelerometers.

OUTDOOR FUNCTIONS

Weather forecasts, altimeter, temperature, pressure in millibars.

OTHER SPECIAL FUNCTIONS

Stopwatch, phases of the moon, alarm, dual time zones.

FITNESS FUNCTIONS

Step counter, distance covered, speed, calories burned.

MIX

1 (Air or EAN) 21%-50%

ADJUSTMENTS FOR CONSERVATISM

Yes, 6 levels.

LOGBOOK MEMORY

160 scuba hours (sampling every 10 sec), 18 hours freediving, approx 600 freedives.

MAXIMUM DEPTH

150 mt.

PC/MAC CONNECT.

USB (included).

STRAP

Silicone, extension cord included.

UPDATE

Interface included.

BATTERY

Lithium ion, USB rechargeable ~ 40 hr (dive) ~ 2-3 months (watch) ~ 6-7 months (stand-by).

Sling gun technology

Seac sling guns are the result of meticulous internal design, with a careful eye to the various ways they will be used, both competitively and recreationally, with options for demanding users as well as for novices trying out spearfishing for the first time. We select our materials extremely carefully, and we never stop innovating, which ensures our success on the market and wins the enormous appreciation of our users.

GUUN 30

FEATURES:

A

Ample cushioned chest loading pad.

B

Stainless steel receiver and retractable mount for a perfect axis line.

C

Muzzle featuring line fastening system to lock the shaft.

Barrel: circular, with 30-mm diam. cross section. Made of extruded 6060 Series Anticorodal aluminum with lower rib. Integrated shaft guide
• Muzzle: open, with seat for two circular slings and line fastening system to lock the shaft • **Butt:** ergonomically shaped, made in dual materials and differentiated densities. Ideal for extended use. Waterproof seal in the butt, even under extreme loads, thanks to double O-ring seated on a special independent pivoting internal drum • **Triggering mechanism:** in laser-cut stainless steel with antifriction polishing on every component • **Sling:** double circular Progressive Power Red D Dyneema with specially formulated blend and coating to ensure greater resistance to abrasion and UV rays. Diameter 16 mm • **Shaft:** in 17-4 PH heat-treated stainless steel, Shark type with small laser-welded fins. Diameter 7 mm. • **Included standard:** Guun 50 Reel, without line.

GUUN 28

FEATURES:

A

Waterproof seal in the butt thanks to double O-ring seated on a special independent, pivoting internal drum.

B

Micrometric trigger in stainless steel. Sensitivity remains consistent regardless of extreme loads.

C

Ergonomic butt in dual materials and differentiated densities.

Barrel: circular, with 28-mm diam. cross section. Made of extruded 6060 Series Anticorodal aluminum with lower rib. Integrated shaft guide
• Muzzle: open, with seat for two circular slings and line fastening system to lock the shaft • **Butt:** ergonomically shaped, made in dual materials and differentiated densities. Ideal for extended use. Waterproof seal in the butt, even under extreme loads, thanks to double O-ring seated on a special independent pivoting internal drum • **Triggering mechanism:** in laser-cut stainless steel with antifriction polishing on every component • **Sling:** double circular Progressive Power Red D Dyneema with specially formulated blend and coating to ensure greater resistance to abrasion and UV rays. Diameter 16 mm • **Shaft:** in 17-4 PH heat-treated stainless steel, Shark type with small laser-welded fins. Diameter 6.5 mm • **Included standard:** Guun 30 Reel (size 75/85) or Guun 50 Reel without line (size 95/105).

Pneumatic speargun technology

Seac offers spearfishing enthusiasts its more than thirty years of experience in manufacturing compressed air weapons. Absolute expertise and reliability are watchwords at Seac, along with Italian manufacturing tradition and quality, which set Seac spearguns apart. Our weapons are assembled internally and quality tested with special equipment.

CACCIA HF

FEATURES:

A

Muzzle is narrower at the tip for a more accurate line of sight with larger holes (9 mm).

B

Outer barrel in an irregular elliptical shape to improve horizontal aim and trim.

C

Ergonomic handle made in two soft overmoulded materials for improved comfort and grip.

Outer barrel: aluminum alloy cylinder with a hydrodynamic shape achieved using Hydroforming technology. This makes it possible to increase the capacity of the outer barrel to make it easier to aim horizontally and to improve trim and buoyancy. The area near the handle is cylindrical so that a reel (optional) can be mounted • **Muzzle:** the end narrows to make the shaft easier to see, thereby improving the line of sight • **Handle:** with ergonomic computer design. Made in two soft overmoulded materials to improve comfort and grip • **Barrel:** with a narrower diameter of 11.2 mm, it reduces the amount of water the weapon has to expel, decreasing loading force and delivering a significant increase in shaft exit speed • **Characteristics:** the reduced size of the piston that acts on the trigger mechanism allows for excellent sensitivity and lower firing force • **Included:** stainless steel shaft, 7 mm in diameter, injector, harpoon, harpoon loader, line, and carrying bag.

ASSO C/R

FEATURES:

Power regulator.

Muzzle in light alloy with larger holes (9 mm) to optimize water drainage.

Ergonomic and functional handle.

Outer barrel: aluminum alloy cylinder, diameter 40 mm • **Muzzle:** in light alloy with larger holes to optimize water drainage • **Handle:** ergonomic and functional • **Barrel:** 13-mm in diameter, making it possible to use 8-mm shafts • **Characteristics:** regulator that makes it possible to reduce the weapon's power by half when needed. Wide range of sizes, from 50 cm to 135 cm • **Included:** steel shaft, injector, harpoon, harpoon loader, line, carrying bag.

Wetsuit technology

"Tailor-made" wetsuit line: this is the approach Seac uses to design and manufacture its line of suits for spearfishing and freediving. The anatomical, preformed cut that characterizes every model our company makes is the result of numerous computer processes, and was designed ad hoc based on a variety of requirements, including fit and the nature of the materials we use. We use only the finest neoprene when making our suits, and we pay careful attention to even the smallest details to make them a true second skin in the water. We even take care to store them at full length; they are only folded and packaged when they ship.

TATTOO CAMO BROWN

NEW

7 mm

5 mm

FEATURES:

A

Single-lined neoprene open-cell Yamamoto 38 neoprene.

B

Seac exclusive camouflage.

C

Aquastop at wrists/ankles/waist/around the face with SSRS system (super-stretch round seal).

Freediving technology

Innovation and advanced technology for wetsuits in the new Seac freediving line. We are adding a new collection to our catalog entirely in preformed, anatomical Glide Skin. These products offer maximum comfort and are conceived and manufactured for freediving, swimming in the pool or open water, and for indoor/outdoor training for men and women.

ENERGY

NEW

man

2 mm

FEATURES:

A

Superelastic Smooth Skin neoprene.

B

Suit glued and stitched for better thermal insulation.

C

The innovative design is designed for maximum visibility on the surface.

Suit for men, designed for freediving and swimming in open water, with an anatomical cut under the arms with no stitches for added comfort while swimming. Smooth Skin neoprene on the outside, 2-mm thick, glued and stitched to prevent water seepage, and fully lined with ultra-elastic fabric. Superelastic Smooth Skin collar and injection-hook Velcro closure to avoid damaging the suit. The innovative design, conceived to deliver the best performance, and the bright color on the arms and legs of Energy ensure maximum visibility on the surface when swimming in open water.

AQUA

NEW

man

1.5 mm

FEATURES:

A

Entire suit with external
Glide Skin.

B

Preformed cut under the arms
without stitching for maximum
comfort while moving.

C

The unique design was
conceived for greater visibility
on the surface.

1.5-mm neoprene suit is fully covered in Glide Skin externally and features flat-lock stitching. The anatomical, preformed design paired with the special underarm cut with no stitches and with superelastic lining, add comfort while swimming and make it an ideal suit for freediving and swimming, both in open water or in the pool.

Fin technology

Lightweight, responsive, and comfortable: these are the three basic characteristics around which we design all of our spearfishing fins at Seac. To allow fishermen and freedivers to remain underwater for extended periods, it's crucial that the foot pockets are designed to be as comfortable and functional as possible, delivering maximum power at just the right moment. Our Seac designers work assiduously to deliver this and to design blades of differing lengths and materials.

MOTUS CARBON

FEATURES:

A

Thermorubber foot pocket with two different hardnesses for a more comfortable fit.

B

22° angle between the blade and the foot pocket to optimize thrust.

C

Wide range of sizes from 36/38 to 47/48.

Model: interchangeable carbon blade fin with closed foot pocket • **Foot pocket material:** made in two materials with different densities. Hard thermoplastic rubber for the sole and ribs, and soft around the foot to optimize the comfort/performance ratio • **Blade material:** Unidirectional 100% pre-preg carbon and internal reinforcements in carbon with 45° weave.

Mask technology

With a camouflage design coordinated with our full line of equipment, the shapes and colors of our masks are designed to meld seamlessly with both the fisherman and the seabed and surrounding environment. The masks are made of opaque silicone, making them non-reflective, which helps camouflage them, and they are smaller in size to fit comfortably and take up as little space as possible while you're in the water.

M70

NEW COLOR & PURE SILICONE

S/COL

FEATURES:

A

The anatomical skirt offers optimal comfort for different shapes of faces.

B

The field of vision is ample because the lenses are very close to the eyes.

C

Liquid silicone with special non-reflective opaque treatment.

Model: Mask made with semi-frameless technology. The internal volume has been reduced so far that the diver almost never needs to equalize
• Color: brown, blue and red • **Frame:** semi-frameless technology with the skirt overmolded directly onto the frame • **Skirt:** High quality opaque liquid silicone • **Lenses:** in 3-mm tempered glass • **Buckle:** 3D pivoting directly on the skirt • **Packaging:** transparent rigid box.

Package of 6 per code.

Mouthpiece material: 100% High-Quality Liquid Silicone • **Tube material:** 100% High Quality Liquid Silicone. The tube features a differentiated cross section designed to ensure excellent breathing and allow the diver to expel water quickly and efficiently. We chose 100% silicone for two main reasons: it's the only material that doesn't change its characteristics or its behavior based on the temperature, and it's also the only material with sufficient memory to maintain its original shape even after being deformed for long periods. Specifically for spearfishing and freediving.

Package of 12 per code.

Sling technology

Every speargun needs the right sling. Seac offers a wide range of slings, 100% natural latex in colors coordinated with all speargun models. Various diameters are available to best meet the needs of each spearfisherman.

SEAC NATURAL LATEX TECHNICAL SPECIFICATIONS

The elongation factor is the percentage to which the sling extends. In other words, the ratio between the sling at rest and the sling under tension, expressed as a percentage (e.g.: 300%). Sling performance is optimized based on the optimal elongation factor without the material losing much of its elastic capabilities.

The stretching force is measured in Newtons, and is the force required to stretch the elastic to its optimal lengthening factor.
